

Important information about your cable connection

Reassignment of TV frequencies on

Dear Residents,

We are constantly improving our cable network and making sure we remain fit for the future. After all, there is a growing need for high speed and connectivity. That is why we are making changes to the frequency spectrum. For you, this means that we are increasing our network capacity for TV, telephone and Internet. This will enable us to provide maximum data transfer rates. What's more. We will also be able to offer one of Germany's biggest TV packages in the future – with more than 150 TV channels, 60 media libraries, 350 radio stations and a huge VOD service.

The reassignment is taking place on and 5 a.m.

between the hours of midnight

The benefits for you:

- TV programmes in brilliant image and sound quality
- A wide range of HD channels
- Access to superfast gigabit Internet in the broadband upgrade area

Please do not remove!

Your neighbours may also need this information.

What will happen during the reassignment

The TV channels will be given new frequencies. Your TV box (receiver) will automatically perform a channel search. Ideally, you will not even realise it has happened, because we will perform the switchover during the night. If the channel search doesn't work automatically, please perform a manual search.
